

Amendments to Claims

IN THE CLAIMS:

1. (Currently amended) A light-emitting device comprising:
an anode comprising a semi-transparent layer having a high reflectivity and a high work function, wherein the semi-transparent layer has a reflectivity of at least 86%; and
a cathode comprising at least one first cathode layer of a low work function material selected from metal, metal oxide and combinations thereof, and at least one second cathode layer having a high reflectivity and a high work function,
at least one emissive layer disposed between the anode and first cathode layer wherein the emissive layer is in contact with the first cathode layer,
wherein said device is a metal etalon microcavity structure.
